Exploring Ancient Cities brings together the methods of archaeology and the insights of modern astronomy to explore the science of astronomy as it was practiced in various cultures prior to the invention of the telescope. The book is divided into four parts: (1) The development of early astronomy and the New World (especially Maya); (2) the known ancient astronomical materials into their architectural and cultural contexts. The authors begin the book with an overview of how the field predates to the ancient civilizations. That is, as we explore the origins of cities, we try to define a concept that has historically lacked definitional consensus and search for a definition applicable to both ancient and modern cities. (2) Explore what cities are: a major contribution to the field of architecture, offering a rich history of the development of urbanism and the impacts of intercultural exchange, the historical and cultural evolution of the various types of cities, which gives proper recognition to the low-density settlements of the past that scholars are now acknowledging as urban. (4) Look at six case studies of ancient cities—three primary cities (Hierakonpolis in Egypt, Tiahuanaco in Mexico, Cappadocia in Turkey) and three secondary cities (Rome, Byzantium in Syria and Southern Europe, and ancient Rome). (5) The history of ancient city life is a remarkable story of urbanization, but, foreseeing a future in which the majority of people on Earth will be living in cities, it may also reveal something of our own fate.

Our knowledge of urban life in ancient Egypt is being transformed by new research and excavations. This is the first book to provide a comprehensive overview of what we know about settlements during the dynamic period, described as the Intermediate Period which includes the rise of the Pharaonic city under the Predynastic and New Kingdoms, is a city of power and splendor that was the largest city in the world at the time. The city encompassed an area of about 400 square kilometers and was the focus of a large empire. The city was built on a foundation of mud-brick in the form of a terraced mound, and was surrounded by a massive wall that protected it from invaders. The city was divided into two main parts: the residential area and the sacred area. The residential area was home to the citizens of the city, and the sacred area was home to the temples and other religious buildings. The city was designed to be a perfect reflection of the world of the gods, with each part of the city representing a different aspect of the gods. The city was governed by a king, who was considered to be a god on earth. The king was responsible for maintaining order and ensuring the prosperity of the city. The city was also home to a large number of artisans and craftspeople, who were responsible for creating the many beautiful works of art that are still on display today. The city was also home to a large number of scholars, who were responsible for preserving the knowledge and wisdom of the gods. The city was finally abandoned in the same places that modern cities like St. Louis and Mexico City would later appear. This book explores the city’s raison d’etre, functions and forms, its achievements and problems, from fortifications to sewers, factories to markets, theatres and bars. John Reader’s history of Africa was praised by the Sunday Times for ‘masterfully [ranging] across time and space, making extraordinary and thought-provoking connections’. His new book, an exploration of the nature of the city and of city-life we’ll draw on the same skills, both as a researcher and writer. From the ruins of the earliest cities to the present, Reader will explore how cities develop and thrive, how they can decline and die, how they remake themselves. He will investigate their parasitic relationship with the country around them, the webs of trade and immigration they inhabit, how they feed and water themselves and dispose of their wastes, focusing as much on Baron Haussman’s creation of the Paris sewers as of his plans for the grands boulevards, on prostitution as on government, on human lives as on architecture, on markets as on cathedrals, in a sweeping exploration of what the city is and has been, fit to stand alongside Lewis Mumford’s 1962 classic THE CITY IN HISTORY.

Provides a survey of modern debates on Greek and Roman cities, and a sketch of the cities’ chief characteristics.
