Numerical Methods for Engineers The numerical results start to drop down in the HOME-Distance plots by adding the convective heat transfer coefficient. Considering a convective heat transfer coefficient equal to 100 W/m 2 K, the drop in absorption is around 2% for every 5 s of handling time. The drop for every 5 s of handling time increases to around 4% and 7% for 200 and 300

Two-dimensional modeling of steady state heat transfer in 12/02/2022 · In this case, the Trefftz functions were used in numerical calculations. In the 1D model, the heat transfer coefficient at the interface between FC-72 and the copper plate was determined by theoretical correlations. The analysis of the results showed that the values and distributions of the heat transfer coefficient determined using both models were similar. This ...
